

## Work Experience

Senior Front-End Developer • Wiserlife *Nov 2022 - Present*

- I revised and participated in the development process of the Clinic application using React (Vite - JS).
- I developed the front-end and serverless part of the payment application using Next.js.
- I created and took on a role in the development process of the Individual Health System application using React (Vite - JS).
- I developed a survey library using React (Vite - TS) for the Clinic and Individual Health System applications.

Senior Front-End Developer • Ceomed *Sep 2020 - Nov 2022*

- In addition to primarily working on the front-end, I also took on tasks in the back-end and mobile.
- I gained experience with Oracle ORDS.
- I developed and improved Roche Webshop (React) and Labplus (Angular) web applications.
- I revised the mobile application of Özel Çakabey Okulları using Ionic - Angular.
- I used Docker and NGINX to simplify the application deployment process, accelerate it, and meet the standard.
- I created services using Express.js for data integrations and enhancements.

Front-End Developer • Adyaz *Jul 2020 - Sep 2020*

- I worked as a front-end developer with Angular.

Information Technologies Teacher *Sep 2020 - Apr 2022*

Kuşalanı • Azize Süleyman Yalçın Middle Schools

- I used Angular and Firebase to build an application that would boost student involvement in class and provide a fair assessment at the end of the year. Class notes, exam material, and announcements are all included in the app.
- I created the programlammers.org website using Angular, creating content based on class notes, and uploaded tutorial videos on YouTube for students.

## Selected Projects

gkhan.dev *Aug 2023 - Present*

- A multi-lingual personal blog Wordpress website created with a custom theme using TailwindCSS and Alpine.js.

kolaytl.net *Jun 2018 - Jan 2020*

- A call credit sales application I developed for a local mobile phone store using Angular and Firebase, which also includes a dealership system.

cvzilla.com *May 2016 - Jan 2019*

- A resume creation application that works on the principle of converting HTML to PDF using Django and the wkhtmltopdf library.

maksemmanav.com *Ara 2015 - Ocak 2017*

- A web application I created using OpenCart that offers delivery at specific times of the day with a cash-on-delivery payment option.

# Gökhan Duman

Computer Scientist

## Summary

- I primarily develop high-performance, user-friendly web applications using JavaScript and TypeScript, with a strong focus on React.
- I'm familiar with various page generation methods such as CSR (Client-Side Rendering), SSR (Server-Side Rendering), SSG (Static Site Generation), DSG (Dynamic Site Generation), and ISR (Incremental Static Regeneration). I can utilize libraries like Next.js, Gatsby.js, Astro.js, Vite, and Angular Universal to implement these methods effectively.
- I design pages with a focus on SEO criteria, ensuring they are responsive and user-friendly.
- I use Sass and PostCSS as CSS preprocessors and work with libraries such as Material UI, TailwindCSS, Bootstrap, BlueprintJS, and more.
- I have REST API and GraphQL experience, and I excel at collaborating with the back-end team, design team, and other frontend developers.
- For unit testing, I use the Jest framework in combination with Jsdom, and I also make use of the Vitest library.
- My Pedagogical Formation certificate demonstrates my dedication to both learning and instructing.

## Education

Mersin University *Sep 2018 - Jun 2019*

Pedagogical Formation

Trakya University *Sep 2010 - Sep 2014*

Computer Technologies and Information Systems
